## **Telecom Site Source – Introduces Gold Level Service The Largest Wireless Site Database on the Internet**

**FOR IMMEDIATE RELEASE:** Boston, MA, June 2001-- Telecom Site Source ([www.telecomsitesource.com](http://www.telecomsitesource.com)), the leading tower search service, announces the launch of its Gold Level Service July 1st. With over 200,000 tower site listings and over 240 companies listed, the Gold Level Service is the largest wireless site database on the Internet. Because this database covers nearly all available tower sites, wireless engineers only have to go one place to find all of the potential tower sites, saving them countless hours of research. “With the Gold Level Service, clients are now able to download the site information directly into Excel or any other database program,” says Dan Munson, VP Sales and Marketing. “Plus,” continues Munson, “the Gold Level Service gives a substantial time savings to companies who search for towers on a daily basis with its larger database of over 200,000 tower site listings and over 240 company listings as compared to the 90,000 tower site listings and over 95 company listings in the standard service.” In addition, the Gold Level Service offers the exact location of each tower, specifically, the longitude and latitude. Interactive mapping features include: searching by address, by company, and by longitude and latitude. Once the search is implemented, a report citing the location of the closest towers, the company, and the necessary contact information is given. The cost of the new service is a subscription fee of \$250.00 per year, and the database will be updated on a monthly basis

### **About CDS Business Mapping**

CDS Business Mapping is dedicated exclusively to the creation and implementation of mapping solutions. CDS’ strength is its ability to successfully combine the three disciplines necessary to successfully implement mapping solutions: mapping, information systems and business strategy. The company provides a full line of mapping software, application development services, Internet mapping development, training and consulting. We show companies how to benefit from using geography to their competitive advantage. The key to our success is understanding how to use
